Vodafone Kabel Deutschland Telephony Interface Specification

Version: 1.01
22.07.2016

Schnittstellenkonform sind Endgeräte ausschließlich, wenn diese durch geeignete technische Maßnahmen so gesichert werden, dass diese weder durch Software- oder Hardware-Manipulationen in einer Weise verändert werden können, dass sie den Anforderungen dieser Schnittstellenbeschreibung nicht mehr entsprechen. Insbesondere ist das Einspielen veränderter Firmware wirksam zu unterbinden.

Mit der Veröffentlichung einer neuen Version dieser Schnittstellenbeschreibung verlieren vorherige Versionen Ihre Gültigkeit.

Zur technischen Erprobung behält sich die Vodafone Kabel Deutschland vor, in räumlich begrenzten Regionen jederzeit abweichende Implementierungen vorzunehmen.

Vodafone Kabel Deutschland übernimmt keine Haftung für die Richtigkeit der im Dokument aufgeführten Referenzspezifikationen.

Contents

Conventions

Throughout this document, the words that are used to define the significance of particular requirements are capitalized. These words are:

"MUST"   This word means that the item is an absolute requirement of this specification.

"MUST NOT"   This phrase means that the item is an absolute prohibition of this specification.

"SHOULD"   This word means that there may exist valid reasons in particular circumstances to ignore this item, but the full implications should be understood and the case carefully weighed before choosing a different course.

"SHOULD NOT"   This phrase means that there may exist valid reasons in particular circumstances when the listed behavior is acceptable or even useful, but the full implications should be understood and the case carefully weighed before implementing any behavior described with this label.

"MAY"   This word means that this item is truly optional. One vendor may choose to include the item because a particular marketplace requires it or because it enhances the product, for example; another vendor may omit the same item.

1 Scope

This document contains the requirements for a telephony device or application to be used in the cable access network of Vodafone Kabel Deutschland.

2 References

In the case of a conflict between specific requirements in this document with requirements in any of the directly or indirectly referenced documents, the specific requirements of this document are applicable.

3 Definitions and Abbreviations

3.1 Definitions

This specification uses the following terms:

Public User Identity	A logical identity for purposes of communication with a User.
Server	A network element that receives requests in order to service them and sends back responses to those requests. Examples of servers are proxies, User Agent servers, redirect servers, and registrars as defined by [RFC3261].
User	A person who, in the context of this document, uses the telephony service.
User Agent (UA)	A software entity contained in a device that acts on behalf of the user to send requests to and receive responses from the network for a particular application. In the context of this document, a UA refers to a SIP User Agent as defined by [RFC3261].
User Equipment (UE)	The User device or application that is compliant to this specification, used by the User that wants to get telephony service.

3.2 Abbreviations

This specification uses the following abbreviations:

DHCP	Dynamic Host Configuration Protocol
DNS	Domain Name System
DSx	Dynamic Service flow Add/Change/Delete
DTMF	Dual-tone multi-frequency
IP	Internet Protocol
IPv4	Internet Protocol version 4
IPv6	Internet Protocol version 6
NA(P)T	Network Address (and Port) Translation
NAPTR	Name Authority Pointer
QoS	Quality of Service
RTCP	Real-time Transport Control Protocol
RTP	Real-time Transport Protocol
SCTP	Stream Control Transmission Protocol
SDP	Session Description Protocol
SIP	Session Initiation Protocol
TCP	Transmission Control Protocol
TLS	Transport Layer Security
TTL	Time To Live
UA	User Agent

UDP	User Datagram Protocol
UE	User Equipment
URI	Uniform Resource Identifier
VKD	Vodafone Kabel Deutschland
VSC	Vertical Service Code

4 IP Connectivity

The SIP UE MUST either use the same IP interface that is provisioned by VKD for data service, or either a separate IP interface.

The SIP UE MUST use IPv4.

The SIP UE MUST NOT be used behind a NAT.

The SIP UE MUST NOT use IPv6.

The SIP UE MUST obtain an IP address using standard DHCP [RFC2131].

The SIP UE MUST NOT announce itself as a Packetcable deviceby by containing string like "pktc1.0", "pktc1.5" or "pktc2.0" in DHCP option 60.

The SIP UE MUST at least request following options (Parameter Request List) to the DHCP server: 1 = Subnet Mask, 3 = Router, 6 = Domain Name Server.

The SIP UE MUST NOT be configured with a static IP address.

The SIP UE MUST conform to the requirements in DNS standards: [RFC1034], [RFC1035], [RFC2782], [RFC2915].

The SIP UE MUST follow standard industry best practice behavior with regards to usage of TTL.

5 SIP Profile

5.1   Configuration of SIP client

Vodafone Kabel Deutschland will provide a set of SIP credentials to the end user, one set for each assigned phone number.

The following entries MUST be configurable in the SIP UE (separately for each assigned phone number):

      a.   Phone Number   (below referred to as "PHONE_NUMBER")

      b.   SIP Domain   (below referred to as "SIP_DOMAIN")

      c.   Outbound SIP Proxy

      d.   (Authentication) Username

      e.   (Authentication) Password

The SIP UE MUST support a Username in the format of this regular expression: "[a-zA-Z0-9_]{9,20}"

The SIP UE MUST support a password in the format of this regular expression: "[a-zA-Z0-9!$/()=?*+#-_.:,]{30,40}"

5.2   Standard SIP Support

The SIP UE MUST be compliant to the base SIP specification [RFC3261], implementing the "User Agent (UA) role" in particular.

The SIP UE MUST only use UDP as transport protocol.

The SIP UE MUST NOT use TCP, SCTP or TLS.

The SIP UE MUST use the default SIP port 5060 to contact its outbound proxy.

The Public User Identity MUST take the form of a SIP URI as specified in [RFC3261].

The Public User Identity MUST be built as follows (based on the phone-number and SIP domain as received from Vodafone-Kabel Deutschland): sip:PHONE_NUMBER@SIP_DOMAIN

Any other URI format (e.g., tel URI) MUST NOT be used by the SIP UE.

The SIP UE MUST never put "anonymous" in any outgoing message.

The SIP UE MUST be compliant to [RFC3262] (Provisional Acknowledgement - PRACK).

The SIP UE MUST be compliant to [RFC3311] (aka. SIP-UPDATE).

The SIP UE MUST be compliant to [RFC3960] (Early Media and Ringing Tone Generation in the Session Initiation Protocol (SIP)).

The SIP UE MUST be compliant to [RFC6337] (Session Initiation Protocol (SIP) Usage of the Offer/Answer Model).

The SIP UE MUST NOT subscribe to any event packages (via SUBSCRIBE/NOTIFY).

The SIP UE MUST NOT use the Privacy mechanism for SIP specified in [RFC3323]

The SIP UE MUST NOT use the Private Extensions to SIP specified in [RFC3325].

The SIP UE MAY be compliant to [RFC3326] (Reason Header Field).

5.3   SIP Registration and Redundancy

The SIP UE MUST be compliant to [RFC3263] (Locating SIP Servers).

The SIP UE MUST support DNS NAPTR [RFC2915], DNS SRV [RFC2782] and DNS A [RFC1035] record queries for locating the SIP server as defined in [RFC3263]. These are to be used to resolve the provided Outbound Proxy into an IP address.

If more than one SIP servers are resolved, the SIP UE MUST always try to register to the first priority SIP server coming from DNS SRV response. The second priority SIP server is only used in case of an outage of the first priority SIP server.

The SIP UE MUST NOT register against two SIP servers in parallel.

The SIP UE MUST always register all of its phone numbers with the same SIP server to avoid a situation where registrations are sent to different SIP server addresses.

In case of a SIP UE failover and registration to the second priority SIP server, the SIP UE MUST try with the next re-registration attempt to register all phone numbers back to the first priority SIP server again.

If the SIP UE re-registration attempts towards first priority SIP server fail, the SIP UE MUST stay registered on the second priority SIP server but the fallback to the first priority SIP server MUST be retried again with the next re-registration attempt.

If SIP UE fallback registration attempt to the first priority SIP server is successful for one phone number all other phone numbers MUST fallback too.

Unless either the user or the application within the SIP UE has determined that a continued registration is not required, the SIP UE MUST re-register an already registered Public User Identity either 600 seconds before the expiration time if the previous registration was for greater than 1200 seconds, or when half of the time has expired if the previous registration was for 1200 seconds or less.

If the IP address of the SIP UE changes (e.g., upon DHCP Renew), the SIP UE MUST start a new SIP registration.

5.4   SIP Security

The SIP Digest method as specified in [RFC3261] MUST be supported.

Any other mechanisms or protocols to protect the SIP signaling MUST NOT be used.

On receiving a "401 (Unauthorized)" response to the REGISTER request, and where the "algorithm" Authorization header field parameter is "MD5", the SIP UE MUST extract the digest-challenge parameters as indicated in [RFC2617] from the WWW-Authenticate header field, calculate digest-response parameters as indicated in [RFC2617], send another REGISTER request containing an Authorization header field containing challenge response as indicated in [RFC2617]. The SIP UE MUST set the Call-ID of the REGISTER request which carries the authentication challenge response to the same value as the Call-ID of the 401 (Unauthorized) response which carried the challenge. The SIP UE MUST NOT include [RFC3329] header fields with this REGISTER.

Similarly, upon receiving a "407 (Proxy Authentication Required)" response to an initial request, the originating SIP UE MUST extract the digest-challenge parameters as indicated in [RFC2617] from the Proxy-Authenticate header field, calculate the response as described in [RFC2617], and send a new request containing a Proxy-Authorization header in which the header fields are populated as defined in [RFC2617] using the calculated response.

The SIP UE MUST NOT authenticate the SIP server.

The SIP UE SHOULD only accept SIP requests from the SIP server IP addresses that are resolved via DNS SRV / A records (SIP server whitelist).

If an incoming SIP request is received by the SIP UE from a SIP server which is not on the SIP server whitelist, the SIP UE SHOULD respond with "403 Forbidden".

5.5 SIP Sessions – Originating

A SIP INVITE message MUST only be sent out by SIP UE during an active registration and only to the SIP server on which the SIP UE is currently registered.

The SIP UE as Caller (side A) MUST apply local ring back tone towards the connected telephone set when it receives "180 (Ringing)" without SDP.

The SIP UE as Caller (side A) MUST NOT apply local ring back tone towards the connected telephone set when it receives "180 (Ringing)" with SDP.

The SIP UE as Caller (side A) MUST NOT apply local ring back tone towards the connected telephone set when it receives "183 (session progress)" with SDP.

An outgoing INVITE MUST use the following format for the "Request-URI" field:
sip:CALLED_PHONE_NUMBER@SIP_DOMAIN

An outgoing INVITE MUST use the following format for the "To:" field:
<sip:CALLED_PHONE_NUMBER@SIP_DOMAIN>

The SIP UE MUST apply the following digit map when determining when to send out an INVITE message with a dialled digitstring:

```
*21[1-9]x.T
*210[1-9]x.T
*2100x.T
*22
*31[1-9]x.T
*310[1-9]x.T
*3100x.T
*32
*35
*36
*41[1-9]x.T
*410[1-9]x.T
*4100x.T
*42
*57
*67*[1-9]x.#
*67*[1-9]x.T
*67*0[1-9]x.#
*67*0[1-9]x.T
*67*00x.#
*67*00x.T
*76[1-9]x.#
*76[1-9]x.T
*760[1-9]x.#
*760[1-9]x.T
*7600x.#
*7600x.T
[1-9]x.#
[1-9]x.T
0[1-9]x.#
0[1-9]x.T
```

00x.#
00x.T
110
112
115
1183[3467]
11899

Notes
- "x." stands for a digit string consisting of zero or more digits 0-9.
- A digit range between square brackets (e.g., "[1-9]") corresponds with exactly one digit in the given range.
- T is digit input timer (inter digit timer).

The SIP UE SHOULD use a value of 4 seconds for T.

5.6   SIP Sessions – Terminating

When it receives an INVITE the SIP UE as Callee (side B) MUST respond with "180 (Ringing)" without SDP.

When it receives an INVITE the SIP UE as Callee (side B) MUST NOT send out any in-band ring back tone via RTP.

When it receives an INVITE the SIP UE as Callee (side B) MUST apply local ringing towards the connected telephone.

5.7   SDP Profile

The SIP UE MUST be compliant to [RFC3264] (Offer/Answer Model with SDP).

The SIP UE MUST be compliant to [RFC4566] (Session Description Protocol).

An INVITE request generated by a SIP UE MUST contain an SDP offer with at least one media description.

This SDP offer MUST reflect the calling user's terminal capabilities and user preferences for the session.

The SIP UE MUST NOT use the precondition mechanism specified in [RFC3312] and [RFC4032].

The SIP UE MUST NOT request/enable authentication/encryption for the media streams.

Upon sending an SDP answer to an SDP offer (which included one or more media lines which was offered with several codecs) the terminating SIP UE MUST select exactly one codec per media line and indicate only the selected codec for the related media stream.

In addition, the SIP UE MAY indicate support of the in-band DTMF codec.

The SIP UE MUST support configuration of dynamic RTP payload type number which is used for DTMF RTP Events as defined by [RFC4733].

If the SIP UE is configured to use DTMF RTP Events as defined by [RFC4733], then it MUST add the following in its outgoing SDP:

a=rtpmap:101 telephone-event/8000

a=fmtp:101 0-15

The SIP UE MUST include the "a=ptime" attribute for all "audio" media lines as described in [RFC4566], with value 20.

If a SIP UE receives an "audio" media line with "a=ptime" specified, the SIP UE MUST transmit at the specified packetization rate.

If the SIP UE supports RTCP Extended Reports per [RFC3611], then this MUST be indicated in its SDP offer per [RFC3611] with encoding "a=rtcp-xr:voip-metrics".

The SIP UE MUST NOT try to set up any video sessions.

Other SDP parameters as "b=AS", "b=TIAS", "a=maxprate" SHOULD NOT be present.

For the forming of SDP the SIP UE MUST follow the examples as given in Annex B.

6   Call features / Supplementary Services

The SIP UE MUST NOT interpret Vertical Service Codes (VSC) locally.

VSCs follow this regular expression: ^(*67){0,1}*[0-9]{1,25}$
Overview of VSCs:

Service	VSC
Calling Line Identification Restriction	*67*<target phone number>
Calling Line Identification Delivery per Call	*76<target phone number>
Call Forwarding Busy – Activation	*21<target phone number>
Call Forwarding Busy – Deactivation	*22
Call Forwarding No Reply – Activation	*31<target phone number>
Call Forwarding No Reply – Deactivation	*32
Call Forwarding Unconditional – Activation	*41<target phone number>
Call Forwarding Unconditional - Deactivation	*42
Call Waiting – Activation	*35
Call Waiting – Deactivation	*36

VSCs beginning with an asterisk (*) MUST be sent transparently and unchanged by the SIP UE to the SIP server (per the digit map as specified above in 5.5).

If the SIP UE is to be used for Call Hold / 3PTY Conference, then the SIP UE MUST implement this per [UAK-S] chapter 2.1.5.5, CASE A.

7 Quality of Service

Quality of Service for voice calls (signaling and media) set up per this specification will be taken care of by the network.

The SIP UE MUST NOT in any way try to request quality of service. E.g, the SIP UE must not initiate any DSx signaling by itself.

8 CODEC-MEDIA

8.1 Codecs

The SIP UE MUST support [G.711] a-Law voice codec (PCMA).

The SIP UE MAY support [G.722] voice codec.

Silence suppression, comfort noise and echo cancellation MUST be implemented according to [G.168].

8.2 RTP and RTCP

The SIP UE MUST send and receive RTP and RTCP packets as defined in [RFC3550] and [RFC3551] for transport of audio flows.

The SIP UE MAY support RTCP Extended Reports per [RFC3611].

The SIP UE MUST use a packetization time of 20ms for RTP packets.

The SIP UE MUST NOT apply any authentication/encryption on RTP and RTCP.

8.3 DTMF Relay

The SIP UE MUST be compliant to [RFC4733] (RTP Payload for DTMF Digits, Telephony Tones and Telephony Signals).

The SIP UE MUST send DTMF RTP Event packets strictly according to 20ms packetization time.

The SIP UE MUST stop the audio RTP stream temporarily for duration of DTMF RTP Event transmission.

8.4 Fax

[T.38] fax relay MUST NOT be used.

Faxes and other modem transmissions MUST be sent in-band over the voice codec.

Annex A
Example SIP messages

This Annex provides some example supported SIP messages:

A.1   REGISTER

REGISTER sip:SIP_DOMAIN SIP/2.0
Via: SIP/2.0/UDP UE_ADDRESS:UE_PORT;rport;branch=aaaabbbbcccc
From: <sip:PHONE_NUMBER@SIP_DOMAIN>;tag=123456789
To: <sip:PHONE_NUMBER@SIP_DOMAIN>
Call-ID: xxxxyyyyzzzz
CSeq: 123 REGISTER
Contact: <sip:PHONE_NUMBER@UE_ADDRESS>
Authorization: Digest username="AUTH_USER", realm="SIP_REALM", nonce="NONCE_VALUE",
uri="sip:SIP_DOMAIN", response="AUTH_RESPONSE", algorithm=MD5
Max-Forwards: 70
Expires: 3600
Allow: ACK,BYE,CANCEL,INVITE,OPTIONS,PRACK,UPDATE
Content-Length: 0

A.2   INVITE

INVITE sip:CALLED_PHONE_NUMBER@SIP_DOMAIN SIP/2.0
Via: SIP/2.0/UDP UE_ADDRESS:UE_PORT;rport;branch=aaaabbbbcccc
From: <sip:PHONE_NUMBER@SIP_DOMAIN>;tag=123456789
To: <sip:CALLED_PHONE_NUMBER@SIP_DOMAIN>
Call-ID: xxxxyyyyzzzz
CSeq: 123 INVITE
Contact: <sip:PHONE_NUMBER@UE_ADDRESS>
Proxy-Authorization: Digest username="AUTH_USER", realm="SIP_REALM",
nonce="NONCE_VALUE", uri="sip:CALLED_PHONE_NUMBER@SIP_DOMAIN",
response="AUTH_RESPONSE", algorithm=MD5
Max-Forwards: 70
Expires: 120
Supported: 100rel
Allow: ACK,BYE,CANCEL,INVITE,OPTIONS,PRACK,UPDATE
Content-Type: application/sdp
Content-Length: 321

Annex B
Example SDP encodings

This Annex shows allowed options for SDP contents:

a. SDP Option 1

SIP UE Support	Answer
G.722 (ptime 20ms)	No
PCMA (ptime 20ms)	Yes
DTMF RTP Events (RFC4733)	No
RTCP-XR Reports (RFC3611)	No

```
v=0
o=<username> <sess-id> <sess-version> IN IP4 <unicast-address>
s=-
c=IN IP4 <connection-address>
t=0 0
m=audio <port> RTP/AVP 8
a=ptime:20
```

b. SDP Option 2

SIP UE Support	Answer
G.722 (ptime 20ms)	Yes
PCMA (ptime 20ms)	Yes
DTMF RTP Events (RFC4733)	No
RTCP-XR Reports (RFC3611)	No

```
v=0
